Application	A perfect material for dissipating large electrical charges. Made of all non-shedding material that is perfect for use in cleaning any small area Cleanroom functions demand.				

**ESD Safe\*** Electro Static Discharge Safe Brushes. Not for use in ESD environment

★ All metal and wood handle brushes can be used in ESD sensitive environments as long as the brush remains saturated in liquid. It is recommended that the brush be tested on the required application to confirm ESD function.

The *MAX ESDline* is the perfect solution for Static Electricity Control. The brushes are made with 100% Thunderon or a mixture of Thunderon and soft Goat Hair. Thunderon is a static dissipating material that breaks up large electrical charges and turns them into smaller ones, eliminating static electricity. The brush is safe to the user and the environment. When you hold the brush, it essentially grounds the brush through your body and neutralizes the static that has built up.

The *CLEANROOMline* is an excellent type of brush for working in the Cleanroom environment. The Delrin plastic handle does not shed, is very durable, and with the hand tied nylon or stainless steel bristles works to effectively clean those hard to reach places. The Non-Metallic construction is perfect for delicate surfaces. These Gentle Cleaning Brushes can be put into an Autoclave. The *11D Series* is one row of bristles hand tied into the Delrin handle. The *22D Series* has two rows of bristles, to clean a slightly wider area. The *33D Series* has three rows of nylon bristles to clean like a toothbrush. The *33ND-003* has finer, .003" diameter nylon bristle to make it softer than the regular *33ND* made with .012" diameter nylon.
