**Application** Assortment of Quality Brushes ranging from stiff bristles for heavy scrubbing to soft bristles for sensitive cleaning.

**ESD Safe\*** Electro Static Discharge Safe Brushes.

\* All metal and wood handle brushes can be used in ESD sensitive environments as long as the brush remains saturated in liquid. It is recommended that the brush be tested on the required application to confirm ESD function.

The *#11P Series* is a single row of tufts with a small face width for fine detail cleaning. Cleans slots and grooves like magic. The comfortable handle shape narrows to a head that fits into tight spots. The Bristles are hand laced with stainless steel wire for maximum bristle retention and long use.

The *#14 Series* is two rows of bristles in a slightly wider handle than the *#11P Series* to fit perfectly into those tough spots. The bristles are hand laced with stainless steel wire for durability.

The *#15 Series* is three rows of bristles in a wider handle. It is similar to the *#30 Series* but with hand laced bristles for maximum bristle retention and durability. Extra fine stainless steel and brass fill (003) is available making a very soft cleaning brush.

The *#30 Series* is a small, inexpensive three row "Scratch" or "Toothbrush" style brush made of rugged and static-neutral plywood. Also great as a general utility brush in the shop, home, or car.

The *#36 Series* is a four row "scratch" brush on a larger handle that is perfect for "board rework" and cleanup. The Horse Hair version is a great cleaner/duster and the stiffer Hog Bristle version works great where a stiffer brush is needed.
